

Anti-poster Film

■ Overview

Anti-poster Film has an uneven surface finish and powerful mold release resin layer that repels posters. Even if a poster is forcefully applied, it can easily be removed by hand.

■ Details

Because the film has adhesive on the back side and is transparent and highly weather resistant, it does not hide underlying colors or patterns. The product can be used long term even outdoors.

The film also reduces ultraviolet light to prevent posters, signs, and information boards from fading.

■ Application Billboards, signage

■ Product size 1240mm × 50m
